ABSTRACT

Nearly 200 ongoing educational programs using outdoor adventure as a learning device are listed in this 1975 directory. The program listings, including a broad cross section of outdoor education adventure programs, give the name of each program, program director, address, and phone number, along with a brief description of activities, length of program, ages of participants, and sometimes cost. Programs are then cross indexed by alphabetic order, geographical location, institutions granting credit (broken down into elementary and secondary schools, public and private, and higher education), and special programming (community service, chemical dependency, delinquent youth, freshman orientation, psychiatric, retarded, and vocational exploration). A materials index lists institutions/agencies from which written evaluations, proposals, and program materials are available. (RS)

Editor's Note

This directory is an outgrowth of the Conference on Outdoor Pursuits in Higher Education held at Appalachian State University in Boone, North Carolina in February, 1974. During that conference it became apparent that all the necessary ingredients for a productive national dialogue on experiential education existed except a forum for discussion and a serious attempt to ferret out all those educational programs that utilize adventure as a core ingredient. This directory is an attempt to provide a framework for increased communication among the many educators in the field active in outdoor pursuits.

This directory has been over a year in preparation and is the product of untold hours of work with the assistance of many graduate students in Experiential Education at Mankato State College and the respondents to our questionnaires around the country. During the fourteen months of preparation I became aware of the impossibility of including all educational programs utilizing outdoor adventure as a learning device. The field is growing rapidly and the deeper I searched the more programs I discovered. To arrive at the nearly two hundred ongoing programs included in these descriptions we circulated over 1500 questionnaires, utlized many mailing lists, and inquired of those we know to tell us of others in the field.

In the final product the directory offers a broad cross section of adventure programs, including at least a few programs from every educational endeavor. I realize there are programs I have not been able to include because of deadlines, resource limitations, and lack of awareness. I appologize for this and trust those programs will be included in future publications.

Without the assistance of many people this directory would be no more than a good idea. I would like to acknowledge the efforts of those graduate students who helped bring this little publication into reality. They are Paul Barrett, Sam Cox, Pat Hammond, Rob Hartz, Abby Lannan, Ted Lannan, Sandy Posmoga, Randy Stevenson, and Tom Stich. And thanks to Wilson Campus School student Sue Torgerson for her typing. And special thanks to Dr. Joseph Schulz and Dr. Robert VanderWilt who encouraged this project and provided necessary start-up resources when other competing demands were being made for those resources.

Looking to the future I have included several blank questionnaires at the end of the directory. These are for leaders of programs not included in this directory so they may be added to mailing lists and future publications.

How to Use the Directory

For each listing we have provided valuable basic information; program leaders names, addresses, telephone numbers. There follows a condensed description of the program with emphasis on special program characteristics.

The indexing at the end of the directory is designed to facilitate locating programs able to provide information, assistance, or a model. In selecting indices that would be of most value from the more than thirty originally proposed I made assumptions about all programs that resulted in reducing the number of indices drastically. The assumptions are that all programs focus on personal growth, all programs can be consultants to others in their particular expertise, and that they all provide programming for "normal" students. Having made these decisions relatively few indices remained important enough to be included.

Perhaps the best place to become acquainted with the directory is to begin in the indices.
